

STAT 7730 Syllabus
Advanced Computational Statistics
Autumn 2017

Instructor: Lo-Bin Chang

E-Mail: chang.1539@osu.edu

Office: Cockins Hall 440F

Office Phone: 614-292-8876

Class Times: MWF 11:30AM-12:25PM

Class Location: Cockins Hall 228

Office Hours: W 4:00-5:00PM, other times by appointment

Teaching Assistant: Chenxi Zhou

References:

Computational Statistics by G. Givens and J. Hoeting

Monte Carlo Statistical Methods by C. Robert and G. Casella

An Introduction to the Bootstrap by B. Efron and R. Tibhsirani

Pattern Recognition and Machine Learning by Christopher M. Bishop

Information Theory, Inference, and Learning Algorithms by David MacKay

Tentative Schedule:

1. Linear Methods for Regression Analysis/Matrix Decomposition: basic numerical analysis, multiple regression analysis, singular value decomposition, QR decomposition, principal component analysis

2. Numerical Methods for Maximum Likelihood Estimation: univariate/multivariate numerical optimization, maximum likelihood estimation, maximum entropy principle, MM and EM algorithm and extensions

3. Random Number and Variable Generation: uniform random number generators, modular arithmetic, combination generators, discrete and continuous random variables, inverse transform method, acceptance-rejection method, tilted sampling

4. Monte Carlo Integration: general formulation, importance sampling, variance reduction, numerical integration and differentiation, bootstrap

5. Markov Chain Monte Carlo (MCMC) Methods: properties of Markov chains, Metropolis-Hastings algorithm, Gibbs sampler, perfect sampling

6. Graphical models: undirected graph, Gibbs random field, dynamic programming, Bayesian network, Gaussian random field

7. Additional Topics: classification problems, deep learning, convolutional neural network and image classification - time permitting

Prerequisites: 6802 (622) and 6950 (645) or permission of instructor. Not open to students with credit for 773. Additionally, working knowledge of linear algebra, advanced calculus, and some programming background is helpful.

Course Description: STAT 7730 is a graduate level course in modern statistical computing methods. This course is not about the use of pre-packaged statistical software. The main goal of this course is to gain an understanding of advanced techniques and ideas used in implementing mathematical/statistical formulations on computers, with a focus on common statistical approaches. Students will be expected to implement the methods we cover in class by programming in a language of their choice. Students can use *any* programming language for this course. **Note:** Students who have had no prior programming experience should expect to spend extra time outside of class reviewing how to write computer code and familiarizing themselves with a statistical programming environment.

Grading: The final course grade will be based on homework assignments (70%) and a final exam (30%).

Homework Assignments: Homework assignments will be given approximately once every two weeks on a Friday and be due the following Friday at the beginning of class. *Late assignments will not be accepted.* The assignments will require the derivation of analytical results as well as the implementation of the computational methods we discuss in class. Please write clear and detailed answers to the homework problems and provide a statement interpreting the obtained results. If a problem involves writing a program, submit a printout of the code with the solution. It is important to provide illustrative outputs of your programs to accompany the homework solutions. For instance, all graphs should be labeled and placed close to the associated written part. Points are allocated to both the correctness of the solution and the level of presentation. Students may consult with each other on the homework problems, but each student must complete and turn in his or her own work. DO NOT copy or use computer code written by another student.

Final exam: To be announced.

Academic Misconduct: Academic misconduct will not be tolerated and will be dealt with procedurally in accordance with university policy, which can be found at <http://oaa.osu.edu/coam.html>. Students are allowed to consult with each other on homework assignments. However, each student must complete and turn in his or her own work. The discussions should be at the ideas level and not the details level. DO NOT copy or use computer code written by another student.

Addressing Issues of Differing Abilities: If you have a documented disability please register with the Office for Disability Services (ODS). After registration, make arrangements with me as soon as possible to discuss your accommodations so that they can be implemented in a timely fashion. If you have any questions about this process please contact ODS. The Office for Disability Services is located in 150 Pomerene Hall, 1760 Neil Avenue; telephone 292-3307, TDD 292-0901; <http://www.ods.ohio-state.edu/>.

Note: Except for changes that substantially affect implementation of the evaluation (grading) statement, this syllabus is a guide for the course and is subject to change with advanced notice.
